

A low-angle, close-up shot of a person's legs and feet as they run on a rocky, dry trail. The person is wearing dark brown running shoes with red accents and white socks. The ground is covered with dry grass and small rocks. The background is a blurred, hilly landscape under a clear sky.

# Fitness Membership Analytics Dashboard

Business Intelligence Project using Microsoft Power BI

Power BI | Power Query | DAX | Data Modeling

## Project Overview

The Fitness Membership Analytics Dashboard was developed to transform raw membership data into meaningful business insights using Microsoft Power BI.

The dashboard enables management to monitor membership performance, revenue trends, customer demographics, and gym usage through interactive visualizations and KPIs.

The solution replaces manual spreadsheet reporting with a centralized Business Intelligence dashboard that supports faster, more accurate, and data-driven decision-making.

# Business Problem

Fitness centers generate large amounts of operational data, but

extracting actionable insights from spreadsheets is both time

consuming and inefficient.

The organization faced several challenges:

- No centralized reporting system

- Difficulty tracking revenue performance

- Limited visibility into membership trends

- Manual reporting consumed valuable time

- Customer behavior was difficult to analyze

These challenges reduced reporting efficiency and slowed business decision-making.

# Project Objectives

- Develop an interactive executive dashboard

- Monitor membership and revenue performance

- Analyze customer demographics

- Measure customer engagement

- Track value-added services

- Support data-driven decision-making

- Reduce manual reporting effort

- Improve business visibility through KPIs

# Dashboard Overview

Neeche short bullets:

- Executive KPIs
- Revenue Trend
- Membership Analysis
- Gender Distribution
- Gym Usage
- Interactive Filters

# Key KPIs

| KPI           | Description              |
|---------------|--------------------------|
| Total Members | Total registered members |
| Total Revenue | Revenue generated        |
| Avg Revenue   | Revenue per member       |
| Avg Age       | Average customer age     |
| Avg Visits    | Weekly member engagement |

## Key Insights

- Highest revenue generated by Premium Membership.
- Majority of members belong to a specific membership plan.
- Customer engagement remains strong with consistent weekly visits.
- Additional services provide opportunities for revenue growth.
- Revenue trend highlights seasonal business patterns.

---

## Business Recommendations

- Promote high-performing membership plans.
- Increase customer retention through loyalty programs.
- Bundle Personal Training and Sauna services with premium memberships.
- Utilize demographic insights for targeted marketing.
- Monitor KPIs regularly using the Power BI dashboard.
- Expand the solution with predictive analytics and forecasting.
